Special Literature

Definition:

Special literature refers to scientific and technological literature with a special publication format. It is often between books and periodicals with extensive and novel content and of complex types .

Types:

Dissertations

Conference papers

Patent documents

Standard documents

Science and technology reports (Research reports)

Government publications

Product samples etc.

1. Theses and Dissertations

Thesis definition: a proposition stated or put forward for consideration, especially one to be discussed and proved or to be maintained against objections.

Dissertations definition: a written thesis, often based on original research, usually required for higher degree.

A thesis or dissertation is a document submitted in support of candidature for an academic degree or professional qualification, presenting the author's search and findings. Theses include Doctoral theses, Masters-level theses and Bachelors-level theses. These can be accessed in hard copy or online.

In the UK, undergraduate and master's thesis is called dissertation, and doctoral thesis is called thesis.

In America, thesis is used for undergraduate and master thesis, and dissertation is used for doctoral thesis.

Therefore, different countries, different universities, and different projects may have different requirements for thesis. See the specific requirements clearly.

- Novel content, high academic value, long and professional
- Massive information and high intelligence value
- Sole author, and the paper is generally only for degree
- Collected by units and some specialized agencies
- Bachelor's degree thesis: About 12000 words
- Master's degree thesis: generally 40000-50000 words
- The doctor's degree is about 100,000 words.

Including: title, author, name of degree, name of school awarded, time for awarding degree, page number, supervisor , subject, source information, abstract etc.

Research and Implementation on Fall Action Analysis Technology in Household Scenarios CN

赵前龙

南京邮电大学

Abstract: With the development of computer network technology and the gradual improvement of intelligent terminal equipment, it is possible to create a smart, safe and convenient home life. Falling is a dangerous action that often happens in household scenarios. How to quickly and accurately detect fall action has become a hot research area in society. In recent years, computer vision and deep learning technologies have developed rapidly, providing a new way to solve this problem. Based on this popular field, a ex... [More](#)

CNKI

Domestic: CNKI

中国科学技术大学
University of Science and Technology of China

It is a full-text database of Chinese doctoral and master's dissertations with complete resources, high quality, and continuous and dynamic updates. The database publishes more than 400,000 doctoral dissertations from more than 490 doctoral training units, and more than 4.4 million master's degree theses from more than 770 master training units, dating back to 1984, covering basic science, engineering technology, agriculture, medicine, philosophy, humanities, social sciences and other fields.

Domestic: Wan Fang

中国科学技术大学
University of Science and Technology of China

The screenshot shows the Wanfang Data (万方数据) website interface. At the top, there is a navigation bar with links for '首页' (Home), '社区' (Community), and '应用' (Application). Below this is a search bar with the text '在 6676621 篇学位论文中检索' (Search in 6676621 theses). The '学位' (Degree) tab is highlighted with a red box. Below the search bar, there is a section titled '中国学位论文全文数据库 (China Dissertations Database)' with a description: '收录始于1980年, 年增30余万篇, 涵盖基础科学、理学、工业技术、人文科学、社会科学、医药卫生、农业科学、交通运输、航空航天和环境科学等各学科领域。' (Collection started in 1980, annual increase of over 300,000 articles, covering basic sciences, sciences, industrial technology, humanities, social sciences, medicine, health, agricultural sciences, transportation, aerospace and environmental sciences in various disciplines). Below this, there is a table with columns for '学科' (Discipline), '专业' (Major), and '授予单位' (Granting Unit). The table lists three categories: '马克思主义、列宁主义、毛泽东思想、邓小平理论' (Marxism, Leninism, Mao Zedong Thought, Deng Xiaoping Theory), '哲学、宗教' (Philosophy, Religion), and '社会科学总论' (General Theory of Social Sciences).

The China Dissertations Database began in 1980, with an annual increase of more than 300,000 articles, covering sciences, industrial technology, humanities, social sciences, medicine, health, agricultural sciences, transportation, aerospace and environmental sciences.

ProQuest full-text database of doctoral and master's thesis is a full-text database jointly purchased and constructed by domestic universities on the basis of the PQDT dissertation abstract database. Up to now, the full-text data has reached more than 250,000. PQDT is the only full-text database in China providing high quality dissertations and theses, which mostly come from over 2000 American and European universities. The scope covers extensive aspects. It is the vital source of information for nowadays.

About

Mission, Goals, and History

Financial Information

Official Documents

Thesis Resources

For Researchers:

NDLTD is an online dissertation co-construction and sharing project supported by the National Natural Science Foundation of the United States.

It provides users with free dissertation abstracts and some free full text dissertations.

At present, more than 170 libraries, 7 library consortia, and more than 20 professional research institutes have joined the NDLTD, providing 70,000 dissertation abstract, and about 30,000 full-text papers which can be linked to.

In addition, since the member libraries of NDLTD come from all over the world, they cover a wide range of dissertations from European countries and Hong Kong, Taiwan and other places. However, there are relatively few abstracts and full texts available, so it is suitable for using as a supplementary resource for foreign dissertations.

2. Conference Literature

Conference literature refers to the materials and publications of various academic conferences, including abstracts of papers submitted in advance by the panelists, papers read or distributed at the conference, discussions at the conference, the official publication of the questions discussed, the exchange experience. It has become an important piece of information to focus on understanding a research field or research topic.

With the rapid development of science and technology, there are more and more societies, associations, research institutions and international academic organizations. In order to strengthen the exchange of information among fellow scientists, each academic organization holds various types of academic conferences regularly or irregularly every year. According to the statistics of the American Institute of Scientific Information (ISI), there are about 10,000 academic conferences held every year around the world. There are more than 5000 kinds of professional conference documents officially issued.

Conference Literature Categories

- **By time of content release**

1. Pre-conference documents : Conference schedule, paper catalog, abstract, preprint of conference paper
2. In-conference literature : Opening remarks, discussion notes and closing remarks
3. Post-meeting documents: proceedings, symposium, audiovisual data

- **By their organizational form and scale**

1. International conferences
2. Regional conferences
3. National conferences
4. Societies or association meetings
5. Industry joint conferences

Publication Format of Conference Documents

- (1) **Books:** Published in the form of books, usually called conference proceedings, mostly under the name of the conference
- (2) **Periodicals:** Published in technical journals, mainly academic journals sponsored by relevant societies and associations. Some journals often end with the form of a supplement or a special issue specializing in reporting important papers in an academic conference
- (3) **Science and technology report:** Some post-conference documents were compiled into scientific and technological reports, such as the four major scientific and technological reports in the United States.
- (4) **Audiovisual materials:** Audio and video recordings will be made during the meeting and will be published in the form of audiovisual materials after the meeting.

Different Names for Meetings

Congress: a formal meeting or series of meetings for discussion between delegates, especially those from a political party or labor union or from within a particular discipline.

Convention: a large meeting or conference, especially of members of a political party or a particular profession.

Symposium: a conference or meeting to discuss a particular subject.

Workshop: a meeting at which a group of people engage in intensive discussion and activity on a particular subject or project.

Summit: a meeting between heads of government, Asia Europe Summit

Forum: a place, meeting, or medium where ideas and views on a particular issue can be exchanged, Boao Forum For Asia

Colloquium: an academic conference or seminar.

It can generally reflect the latest progress and achievements in the subject or professional field. Many new discoveries and new equipment will also be announced and discussed for the first time at the conference. Its content is novel and academic, and it often represents the level and dynamics of various science and technology majors.

- Specificity
- Continuity
- Novelty
- Enormous

Difference between Conference & Journal

Conference Papers

- The main purpose of the conference is to exchange information and exchange ideas through on-site speeches.
- Conferences often reflect the latest and cutting-edge research, many of which have not yet reached the level of publication in official journals. Therefore, the main purpose of the conference is to quickly disseminate scientific research information in order to obtain valuable opinions and feedback from the audience.
- Meetings often try to cover many participants, so there is often higher paper acceptance rate.

Difference between Conference & Journal

Journal Articles

- No presentation and other verbal exchange of information
- Journal publication reflects more rigorous review and higher quality results
- Most journal articles have at least 3 reviewers to review the manuscript, and the associate editor will finalize the manuscript
- Journal papers must reflect the research status of the field, because reviewers will carefully review the cited documents
- The acceptance rate of journal papers is usually much lower than conference papers

If we want to participate in an academic conference or submit paper to it, we need to know in advance when and where meetings to hold, the organizer, and participation conditions etc.

Conference documents are mainly distributed in some websites and databases. It mainly includes the following four categories:

1. Conference information service website
2. Websites of related academic institutions
3. Chinese conference literature database
4. Foreign language conference literature database

1. Conference Information Service Website

Features: Free service, rich conference related information (pre-meeting report, conference schedule, conference video on demand, conference paper catalog and even full text).

(1) China Conference Network (<http://www.chinameeting.com>)

Publishes various conferences, exhibitions, training information and some international exhibitions held in China. Online registration is available. Users can register as their members and receive conference information through e-mail.

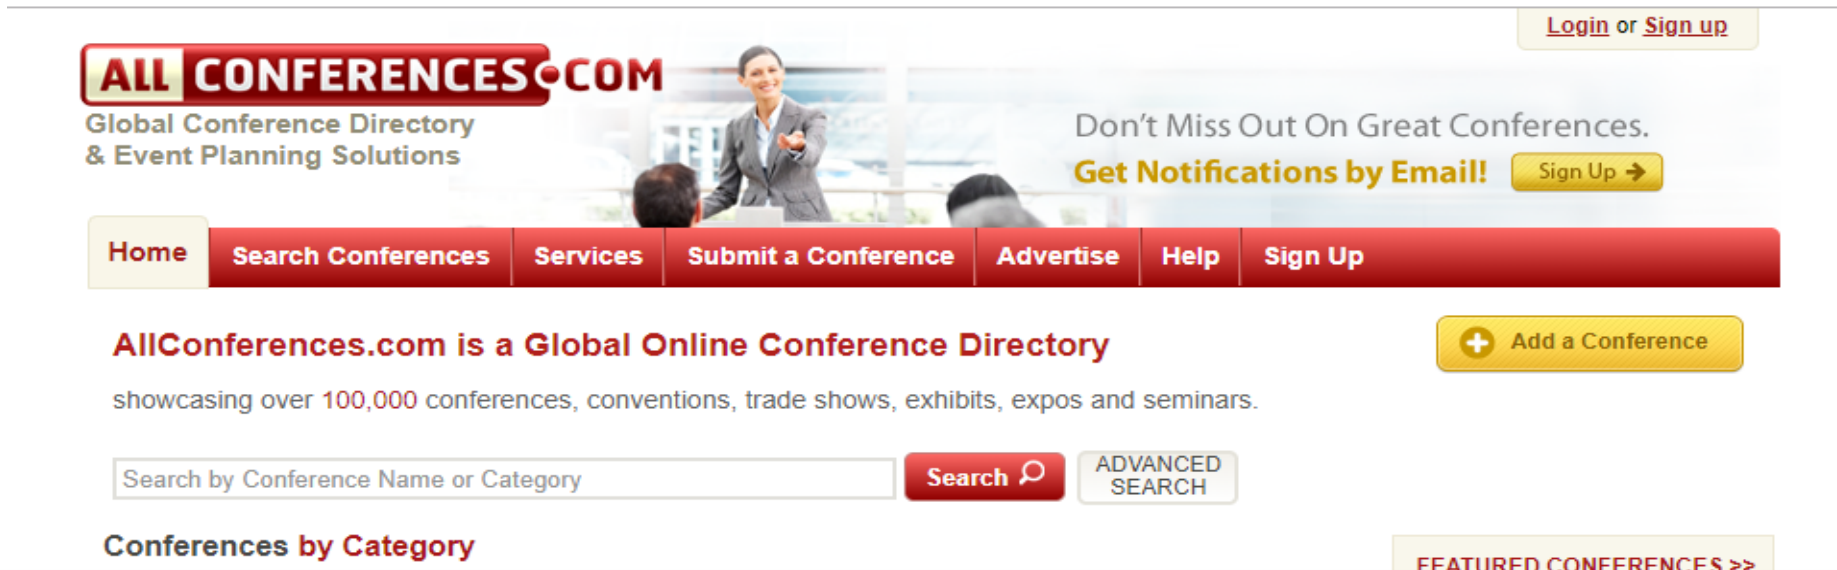

(2) Sciencemeeting Online (www.meeting.edu.cn)

Sciencemeeting Online is approved by the Ministry of Education and hosted by the Science and Technology Development of the Ministry of Education. It is an information service platform for scientific research and academic exchanges for scientific and technological personnel. The information provided by this website includes conference review, conference preview, report video, conference papers, etc.

(3) ALL CONFERENCE.COM

A catalogue website that provides various conference information. Users can also search the catalogue to obtain specific conference information. At the same time, the website provides services such as online registration and payment procedures. The range of conferences provided by the website includes academic conferences in various disciplines such as humanities and social sciences, business, computer and internet, and education.

2021 28th Conference of Open Innovations Association (FRUCT)

25 - 29 January 2021

FRUCT is a large cooperation framework between academia and industry in form of open innovations. In average FRUCT conferences are attended by representatives of 25 universities from Europe and Asia, and industrial experts from many companies, e.g., Dell, Samsung, Intel, Nokia, etc. The conference is an R&D forum for the most active students, academic experts, industrial researchers and influential representatives of business and government. The conference invites the world-class academic and industrial researcher to give lectures on the most relevant topics, provides an opportunity for student teams to present progress and results of their R&D projects, meet new interesting people and form new teams. The conference program includes intensive trainings on most relevant topic, keynote and invited talks, and high quality scientific sections.

CPCI gathers the latest published conference proceedings in the world, including monographs, series, preprints and conference papers from journals, and provides comprehensive, multi-disciplinary conference papers on the Web of Science platform.

3. Standard Documents

- **Definition:** Standards are formulated according to prescribed procedures, within a specific scope recognized by the agency or approved by the competent authority, such as specifications, rules and technical requirements.
- **Features:** The standards are legally binding. The technical regulations are detailed, complete, reliable, and frequently updated. Attention must be paid to the latest standards when searching.

Classification:

1 According to the scope of application of the standard:

International standards, industry standards, local standards and corporate standards.

2 According to the maturity of the standard, it can be divided into: mandatory standard, recommended standards, trial standards and draft standards.

3 Foreign standards are divided into three levels: international standards, regional standards and National standard

Domestic Standard Access

- CNKI

- Wanfang Chinese and foreign standard data comes from the National Quality Supervision Bureau, covering 14 domestic and foreign standards databases.

Full Text Disclosure System of National Standards

WeiPu Standard Information Service Platform

www.buidea.com

- It provides classified management and query applications for domestic and international standards.
- The platform adopts advanced cloud service models to simultaneously update standard change information issued by national authorities, reveal the replacement, adoption and citation of standards at the first time, and realize the real-time standard tracking service.
- The platform can query and manage more than 210,000 domestic standard metadata resources.

INNOVATION

NEW VENTILATOR STANDARD

International Organization for Standardization referred to ISO, established in 1947, is an international organization whose purpose is to promote international product exchange and cooperation. ISO certification has become an important part of the industry.

4. Scientific and Technological Reports

- A scientific report is a formal report on a scientific research project or scientific activity;
- Reports or situation records are written by research, design units or individuals;
- Report to the department or organization that provides funding and resources;
- Report on the progress of the design or project;
- It is for the purpose of accumulation, dissemination, and communication;
- Written in accordance with relevant regulations and formats, true and complete;
- Experience of personnel engaged in scientific and technological activities

Features

- The content is in-depth and novel;
- Each science and technology report is published in a single volume, written in a prescribed format;
- Each report has a serial number or the report number. The form is the abbreviation of the reporting unit or competent authority plus sequence number composition;
- With confidentiality.

- According to the publication form: technical report, technical paper, technical bulletin, etc.
- Divided by research stage: initial report, progress report, annual report
- According to the nature of the report: formal report, special report, evaluation report

Effects

- Compared with books and periodicals, its length can be long or short, but it is new and extensive . It has strong professionalism and specific technical data.
- Priority reference materials for engineering personnel. It is useful for the exchange of various scientific research ideas
- Promote invention and creation, assess technological gaps, improve technological solutions, and increase decision-making, avoid duplication and waste in scientific research, and promote the transformation of scientific research results.
- Play a positive role for productivity.

The National Science and Technology Reporting Service System is a free shared service at the national level. It is positioned at the domestic science and technology report of various projects. It is useful for information retrieval, project declaration and appraisal, evaluation, duplicate check, and novelty check.

为加快实施国家创新驱动发展战略, 按照促进科技成果转化行动的部署, 科技部以国家“863”、“973”、国家科技支撑计划等财政科技计划产生的科技成果为重点, 汇总发布一批符合产业转型升级方向、先进适用的科技成果, 涉及新一代信息、能源、现代农业、高端装备与先进制造等11个技术领域。旨在通过需求导向和市场选择方式, 引导企业、地方、社会资本和各类机构参与, 推动一批科技成果转化与示范推广, 促进科技成果转化现实生产力, 支撑产业转型升级与经济结构调整, 更好发挥科技创新对供给侧结构性改革的支撑和引领作用。

摘要

Maintaining urban vitality and promoting sustainable urban development is a critical concern because global urbanisation continues to accelerate. This study creates a model to measure urban vitality by means of NPP-visible infrared imager radiometer sensor (VIIRS) nighttime light data and observes that urban vitality and NPP-VIIRS nighttime light data are highly positively correlated, which greatly expands the application of nighttime light data in urban research. This paper further researches the impact of population inflow and social infrastructure on urban vitality by establishing a panel fixed effect model based on the data of 35 large- and medium-sized cities in China to provide new ideas to understand urban vitality from the perspective of public service. The results illustrate that increasing the financial investment of social infrastructure can effectively improve urban vitality, and population inflow influences urban vitality through the interaction effect with social infrastructure. With the inflow population increasing, the educational financial expenditure's positive effect on urban vitality will be enhanced, and the medical and health financial expenditure's positive effect on urban vitality will be suppressed. This paper provides guidance regarding reasonable population inflow and urban vitality improvement.

Rural migrants
Hometown housing investment
Homeownership
Urban destination
Heterogeneous effects

ABSTRACT

The relationship between transnational housing investment and homeownership status in destinations has received considerable attention. However, the direct causal link between both activities remains scant. This study introduces a new conceptual and empirical framework, quasi-transnationalism and integration nexus, to discuss the causal effects of hometown housing investment on the homeownership of rural migrants in urban destinations. The research also applies a national representative data in China, the National Migrants Population Dynamic Monitoring Survey (NMPDMS), to explore such causal effect. The results show that hometown housing investment has a significantly negative effect on homeownership in urban destinations, whereas the substitution effect of hometown housing investment exceeds the complementary. The conclusions are consistent when IV-LPM regression is applied to correct the potential endogeneity of migrants' hometown housing investment. There are some notable differentials across life cycle groups and origin-destination groups, those are, hometown housing investment produces a larger negative effect for the old generation than the new generation, while it also plays a more important role for migrants who moved within the same regions, but the effect on the migrants from Central and Western China to East China is the weakest among the four origin-destination groups. The possible mechanism is that hometown housing investment influences the housing tenure choice through affecting the return migration plan and housing purchase intent in urban destinations.

1. Introduction

Homeownership is viewed as a sign of migrants' economic success. Owning a house is often portrayed as a long-term commitment to the host society and an important step toward the migration assimilation process (Alba and Logan, 1992; DeSilva and Elmelech, 2012; Painter

flow and immigrants are likely to settle permanently in the host countries, whereas less attention has been given to non-permanent groups (temporary residents or undocumented immigrants). As for the non-permanent immigrants, some of them migrate only to earn enough money to accumulate capital for investment in their hometown or supplement their family budgets (Owusu, 1998). They usually keep

ProQuest Central is the largest single periodical resource available, bringing together subject areas including Business, Health and Medical, Language and Literature, Social Sciences, Education, Science and Technology, as well as core titles in the Performing and Visual Arts, History, Religion, Philosophy.

3. Open Access

- Open access journal which started in the late 1990s are scholarly journals that are available online to the reader without financial, legal or technical barriers.
- This is a new method of academic information exchange. Authors submit works and do not expect to receive direct monetary rewards, but provide these works so that the public can use them on public networks. For users, open access journals are free journals.

GoOA, a one-stop discovery platform for open access papers, is an open resource funded by the Chinese Academy of Sciences and launched by the Chinese Academy of Sciences Document Information Center. It contains more than 2500 OA journals and their full texts from 144 well-known publishing houses that have been strictly selected. The subject areas involve natural sciences and some social sciences.

Search

Resource features include:

- 1) **Journal selection:** Establish strict selection criteria for OA journals to make "OA paper discovery" more authoritative;
- 2) **Paper integration:** provide nearly 2000 OA journals in the natural sciences, efficient journal integration and paper organization, making "OA paper discovery" easier;
- 3) **Contribution analysis:** provide quality assessment of OA journals and complete analysis of submission information, allowing you to know everything about OA journal submissions with one click, and you don't have to worry about submitting;
- 4) **Associated retrieval:** realize associated knowledge discovery and retrieval, allowing you to have an experience beyond expectations;

The Socolar platform is dedicated to collecting free OA electronic full-text journals on the internet. At present, it has reached 11,739 types, involving various disciplines. Among them, there are many high-quality journals that can be used as auxiliary resources for scientific research and teaching.

6. Interlibrary Loan & Document Delivery

The library has established document delivery and interlibrary exchange with the Chinese Academy of Sciences Document Information Center (CSDL), the Chinese University Humanities and Social Sciences Document Center (CASHL), Tsinghua University Library, National Library, and Shanghai Library. With the borrowed partnership, various documents outside the library can be obtained through these document systems.

Please send an email directly to qcqu@ustc.edu.cn. No attachments are required. The email indicates the Chinese name, student ID, contact number, and bibliographic information (title, source, year volume page number, etc.) of the required specific documents.

Research & Critical Evaluation

Seven Steps of Research

1. Define your research question
2. Ask for help
3. Develop a research strategy and locate
4. Use effective search techniques
5. Read critically, synthesize, and seek meaning
6. Understand the scholarly Communication Process & Cite Sources
7. Critically evaluate sources

Leslie F. Stebbins, *Student Guide to Research in the Digital Age: How to Locate and Evaluate Information Sources*, Libraries Unlimited, 2006.

Art of Reading a Journal Article

Art of Reading a Journal Article

Reading scientific literature is mandatory for researchers. With an overflow of journals, it is essential to develop a method to choose and read the right articles.

Objective: To outline a logical and orderly approach to reading a scientific manuscript. By breaking down the task into smaller, step-by-step components, one should be able to attain the skills to read a scientific article with ease.

Methods: The reader should begin by reading the title, abstract and conclusions first. If a decision is made to read the entire article, the key elements of the article can be perused in a systematic manner effectively and efficiently.

Cognitive Strategies

- Read the information related to the name of the journal and the authors' affiliation
- Read the title of the article, read the headings and subheadings
- Looked at the images/illustrations of the article
- Activated prior knowledge related to the topic of the article
- Tried to predict the topic of the article
- Underlined the unknown words
- Guessed the meaning of some of the unknown words

Cognitive Strategies Continued

- Checked the meaning of some of the unknown words in an English to English dictionary
- Skipped difficult and incomprehensible words/sections
- Translated difficult sections into your own language
- Highlighted important information
- Took notes of important information
- Skimmed through unimportant or irrelevant parts, paraphrased some sentences, reread sentences, wrote a summary
- Developed a simple filing system that works for you

Key Points

- Reading articles on a regular basis will improve your reading skills and the information you learn from them
- Develop a simple, searchable filing system that works for you if you are
- Undertaking a piece of research
- Most eminent scientists will usually direct you right to the figures after a brief abstract and introduction to outline the research question
- The abstract is a brief synopsis of the article providing a useful summary
- A double-blind peer review is where both author and reviewer are unknown to each other before publication; essential for absolute scrutiny and to ensure that the research is both accurate and without bias.
